

Hand Rail

A-Safe Hand Rail is a light weight system that is an ideal choice in areas of the work place where there is a risk of falling or where it is crucial to segregate people from dangerous equipment and guard against other potential risks. The standard version comprises a 90x90mm post and 2 rails with standard post centres of 1.5m and height of 1.1m. This fully module system can be made up to suit your needs and examples include special lengths, corners, T posts etc.

Applications and Benefits

Designed to restrict people to defined routes, organise and protect warehouses, manufacturing facilities, airports, maintenance pits and around any relevant building inside or out. They clearly mark out the pedestrian pathway and act as a physical barrier, ensuring visitors and personnel alike do not accidentally stray from safe areas. Extras such as swing gates, slide gates, sign boards and kick plates are easily added.

Health and Safety Did You Know

“A well-designed and maintained workplace will make transport accidents less likely.”
(Workplace transport safety, An employers' guide)

Customer Endorsement

“The metal barriers we previously had in place were easily damaged and required repainting on a regular basis.”

Coca Cola, Malvern

David Lindesay, Services Team Leader

Technical Did You Know

- I Hand Rails used to segregate and guide pedestrians should have a height of 1100mm
- I Passes BS6180 balustrade test - 1.5kn point load
