

LIGHT VEHICLE
PROTECTION

Micro Barrier 125mm OD

In areas where vehicles are mainly propelled by hand or are powered and operated by pedestrians, impacts with walls, structural surfaces, machinery or goods can occur. Such impacts are unlikely to cause severe damage but can still result in repair and replacement costs to structures and valuable machinery in light industrial premises and warehouse situations. The Micro Barrier is an ideal cost effective solution in low weight and lighter traffic situations. The outside diameter is 125mm, in both single and double rail configurations, with relative overall heights of 250mm and 440mm with impact heights of 190mm and 380mm respectively. These versatile barriers are useful in tighter confines and restricted spaces.

Applications and Benefits

This very versatile product is suitable for both light vehicle and wall protection in any general work areas; for use both internally and externally. Mainly used where pedestrian operated powered pallet trucks are present and can withstand knocks from small powered vehicles up to an order picker pallet truck (PPL). Like all A-Safe barriers it is highly visible in yellow and black and easily seen by drivers and pedestrians with self-propelled vehicles.

Health and Safety Did You Know

“Moving vehicles need to be carefully managed to control and reduce the likelihood of accidents”

Customer Endorsement

PROVAN
MAINTENANCE LTD.

“I have been so pleased with the A-safe barriers that I am now using the product as a precedent for all future safety projects and have sent in another order for further barrier systems.”

Mick Clavon, MD, Provan Pipework

Technical Did You Know

- Fixing posts inclined towards potential impact point for maximum resistance and force dissipation.
- Anchor points capable of being located closer to protected objects in space restricted areas.
- Maximum post centre width 2m
