

RACK GUARD

A-SAFE BARRIER LEG PROTECTA

As part of the continuous development of the A-Safe RackGuard safety product range, the Leg Protecta is a simple, yet innovative, protection device for safeguarding pallet racks. With energy absorption in mind, under impact loading, this rack upright protector is designed to deform in shape to dissipate the force and return to its original shape and condition once the load is removed, without causing damage to the rack upright column. There is also minimal damage to vehicles. Leg Protecta is manufactured to the same high standard of quality, strength and sustainability as that of all the A-Safe safety barrier products.

Applications and Benefits

- Reduces the risk of impact damage caused by fork lift trucks or other handling equipment
- Improves safety and protection of the pallet racks
- Simple design
- Versatile
- Fits multiple upright sizes from 80mm up to 125mm
- Minimal installation cost, no drilling, fixings or bolting required
- Manufactured from high impact grade polymer
- Fully recyclable
- Can withstand low temperatures within a freezer environment
- Highly visible

Health and Safety Did You Know

Impact damage caused by fork-lift trucks or other moving equipment against rack-uprights shall be avoided by appropriate safety measures. The minimum requirements for the protection of uprights shall be as follows:

An upright protector with a height of not less than 400 mm (15.75 inches) should be positioned at the end upright of each run of racking between cross-aisles.

Technical Did You Know

- The A-safe Leg Protecta is designed to meet the impact loadings as specified in European Racking Code FEM 10.2.02 for the frontal impact protection of the pallet racking column.
- The A-Safe Leg Protecta is designed to withstand a minimum impact of at least 400 Nm (3540 pound-force-inches) at any height between 100mm and 400mm.
