

# Swing Gates

Swing gates are mainly used with pedestrian barriers but are compatible with most barrier systems by using an interface post. They can also be used as a stand alone gate. The gates are ideal for pedestrian access and are available in safety green colour as well as the standard yellow. The gates are double swing action but stops can be added to ensure it only swings one way. The standard sizes are 1000mm, 1500mm and 2000mm although any size is available up to 2000mm. They can be installed in pairs to give openings to a maximum of 4000mm.

## Applications and Benefits

Swing Gates are used for access points and exit points for pedestrians. They act as a physical stop so the pedestrian has to open the gate instead of walking straight through a gap. The safety green gates indicate access points for fire exits, fire or safety equipment or medical assistance. The green can be easily seen especially in a long run of yellow barrier. The gate stops allow you to limit the swing action to one direction, so for example a pedestrian must pull the gate towards him. Monkey tail bolts can be used to secure gates in and open or closed position. Gate locks are also available.

### Customer Endorsement

"These products are vital in ensuring our employees are safe and are not put a risk whilst at work"

*Fox's Biscuits - Batley*

*Dean Rands – Internal Warehousing and Distribution Manager*

### Health and Safety Did You Know

"Where pedestrian and vehicle routes cross, you should provide appropriate crossing points for people to use."

*(Workplace transport safety, An employers' guide)*

### Technical Did You Know

- Swing gates are ideal for Pedestrian access and exit points but also provide a physical stop rather than just a gap.
