

Best in class perimeter protection for luxury Lexus parking lot

A-SAFE's dedicated parking lot impact guardrail was recommended for installation at a UK Lexus dealership, with the aim of providing an impact absorbing solution.

 Parking Lot  Automotive

Customer:

Japan's largest-selling premium vehicle brand Lexus is the luxury vehicle division of Toyota, marketed in over 70 countries and territories worldwide.

Situation:

A UK dealership team required a safety solution to shield the site's parking lot and brand new Lexus vehicles within it. The high level parking lot needed guardrails that could withstand vehicle impacts and provide edge protection around the perimeter of the space. Ideally, the solution would also deter thieves and youths from accessing the parking lot.

Solution:

A-SAFE installed Single Parking Lot Guardrail to define the edge of the parking lot and ensure a protected, designated space for vehicles. Even if a vehicle did impact the guardrail, the flexible, absorbent nature of the material is designed to cushion the impact and avoid damage.

Our parking lot guardrails are purpose designed for high traffic parking lots and certified to BS6399 — creating a safer place to park.

Products:

- Single Parking Lot Guardrail
